 KEY OBJECTIVES

- Mastering demanding driving situations through the use of Gaia-X
- Integration of project-specific data services and data exchange in a data space
- Implementation of two field-based use cases

 FACTS & FIGURES

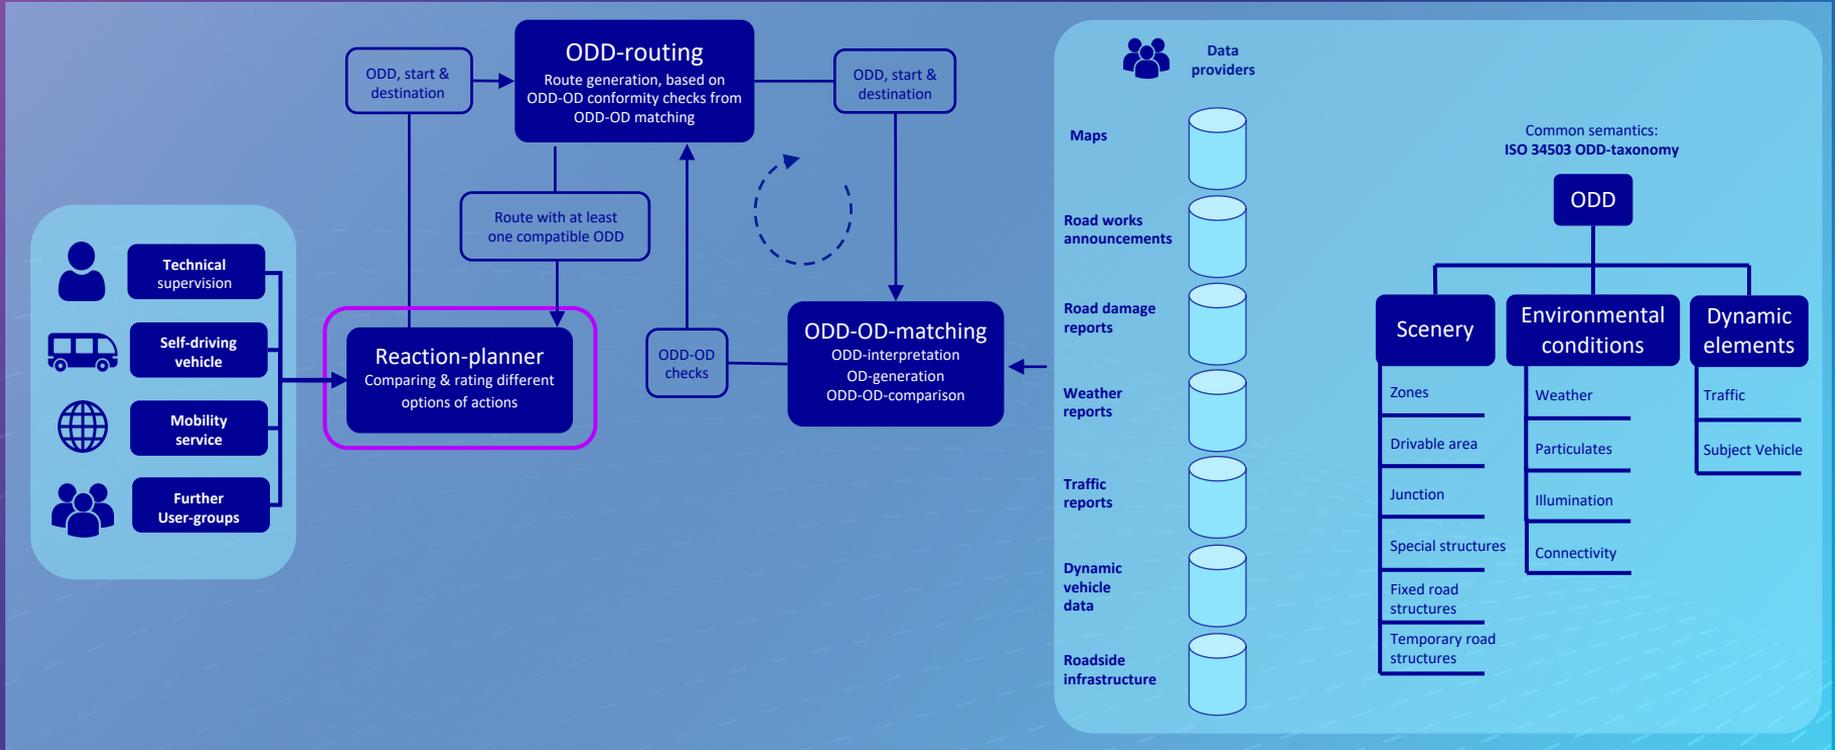

Lead: T-Systems & DLR
Number of project participants: 19
Duration: 12/21 - 09/24
Total funding: € 20.79 million

 USE CASES**SAFE COORDINATION OF AUTONOMOUS VEHICLES**

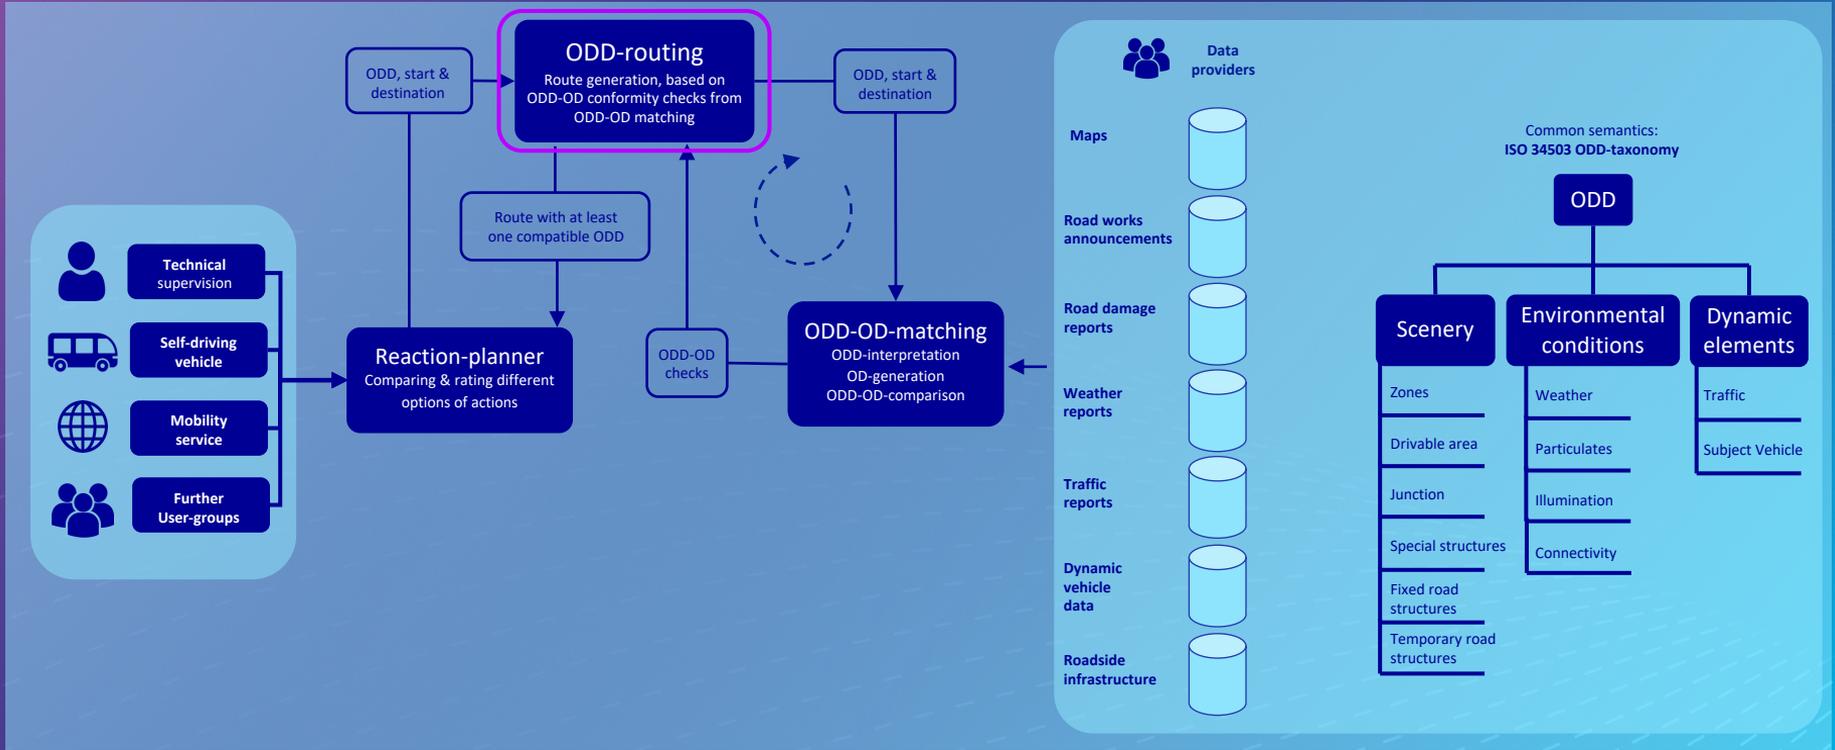

Providing information on infrastructure, traffic and vehicles to ensure the safe operation of automated vehicles

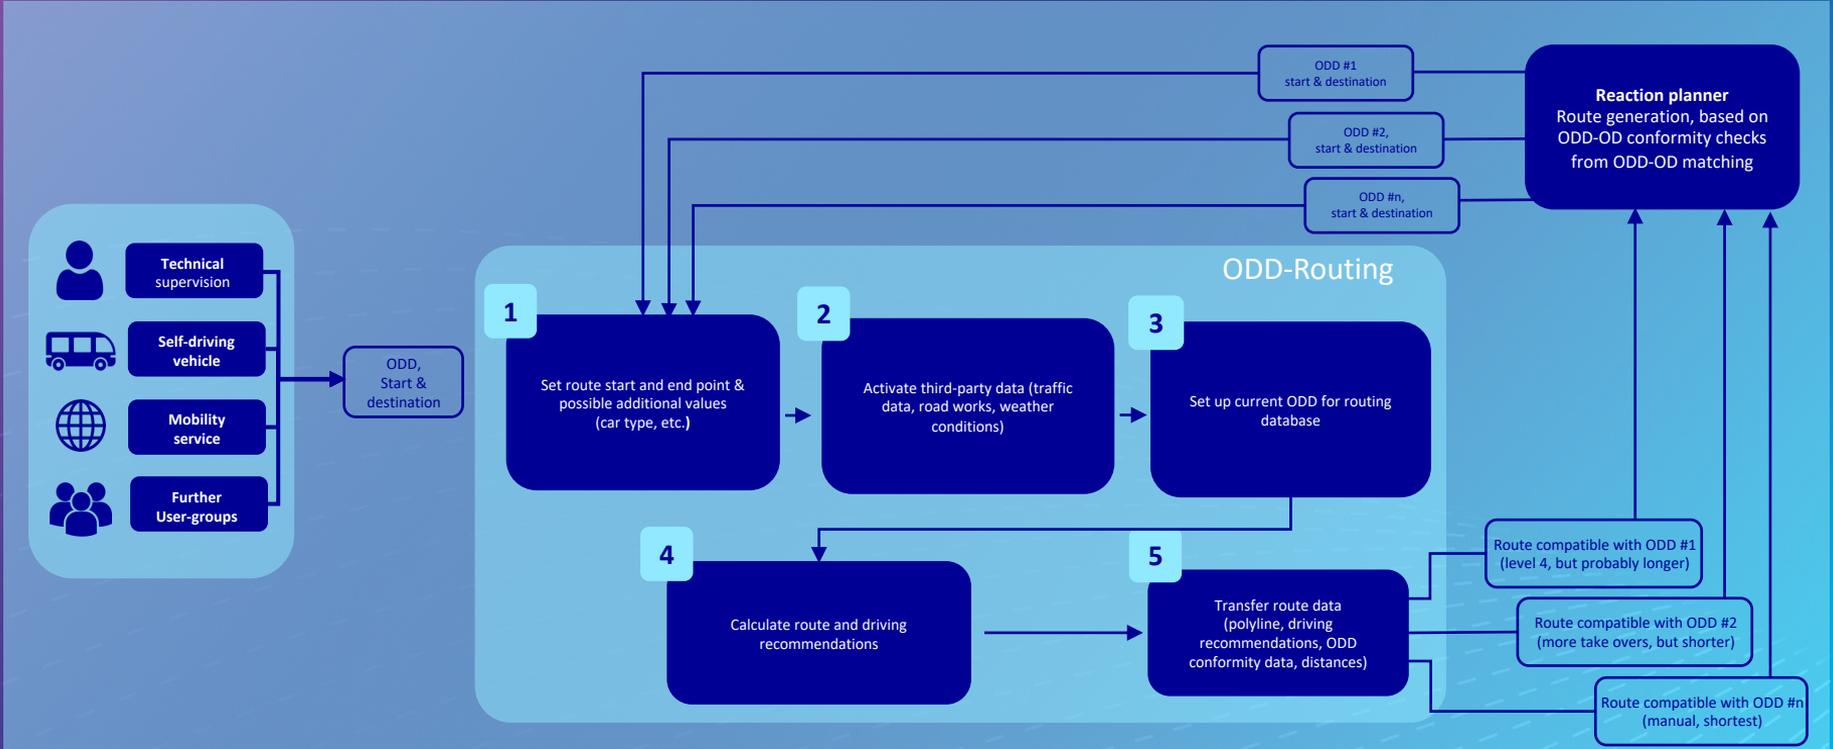

**INTERCONNECTED AND SAFE RESCUE CORRIDOR**

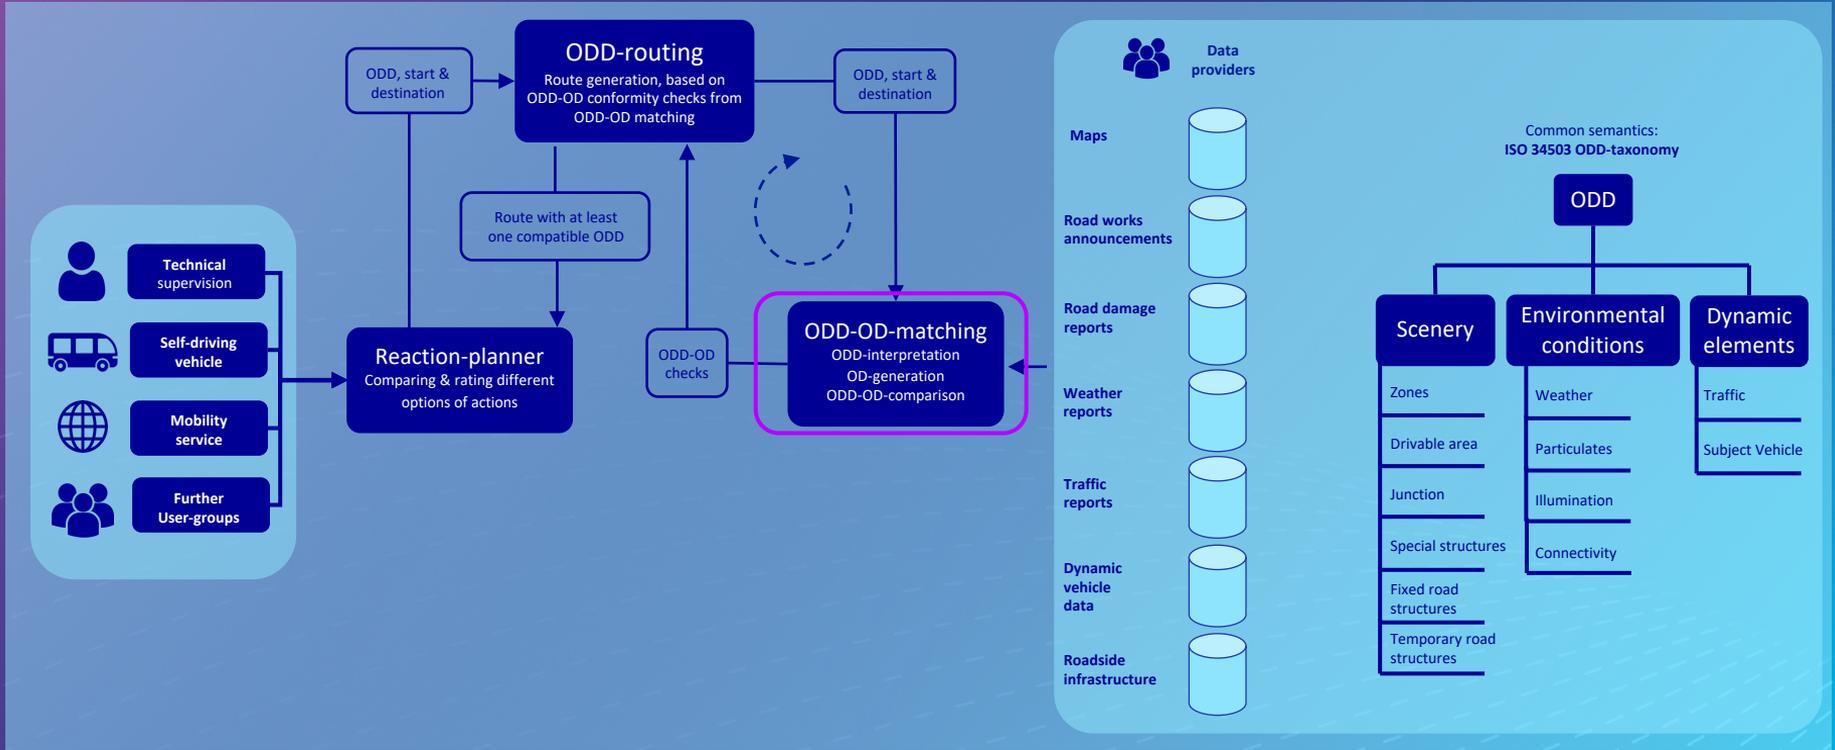

Creating a prototype of an interconnected rescue corridor that provides dynamic information and supports the safe journey of emergency vehicles.

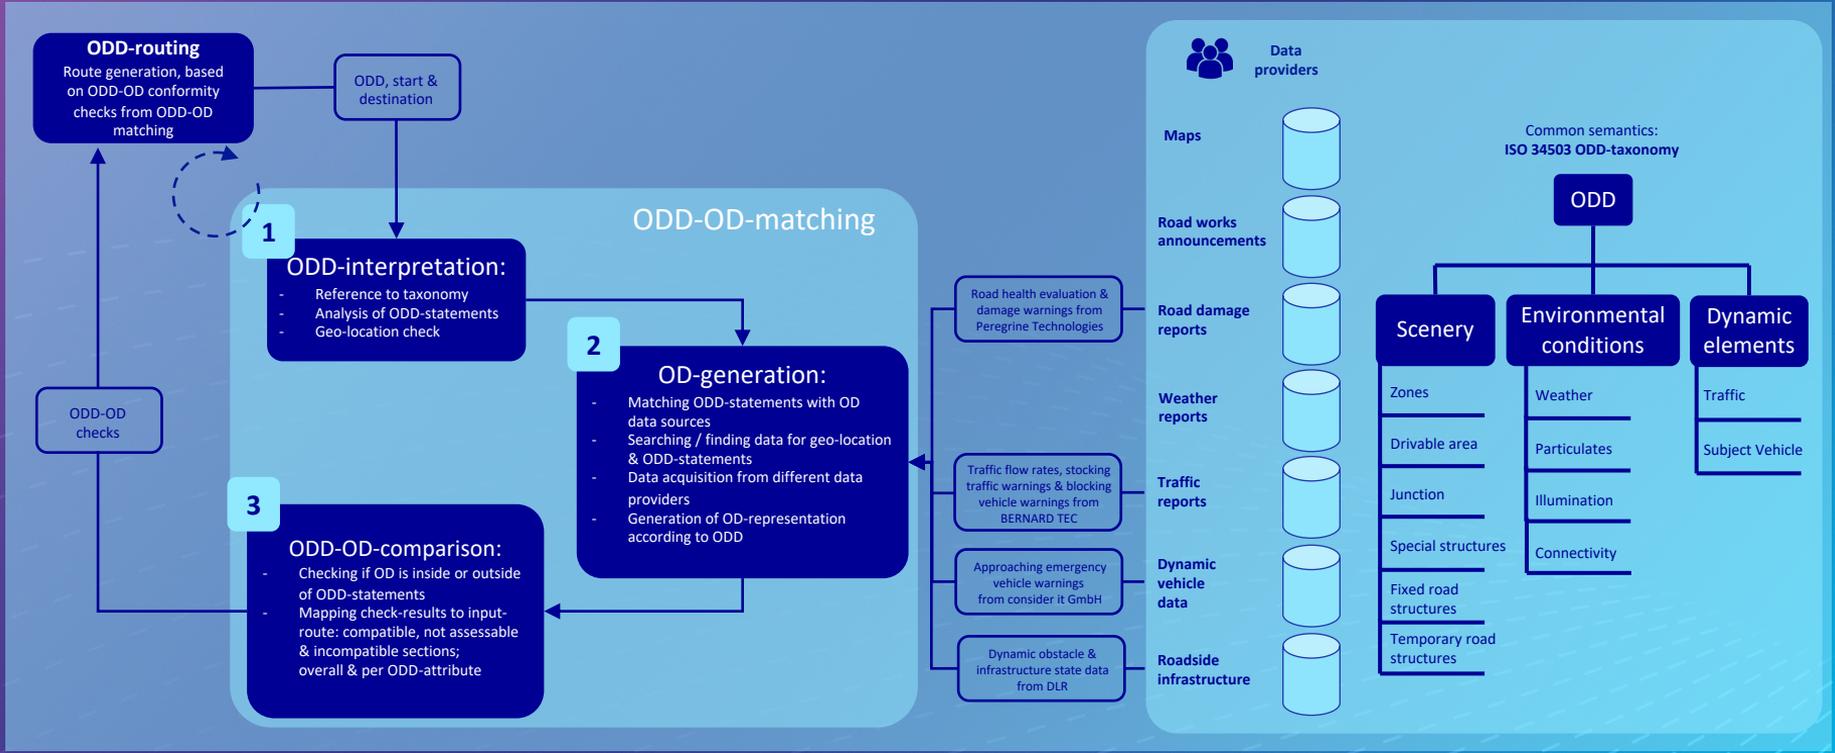

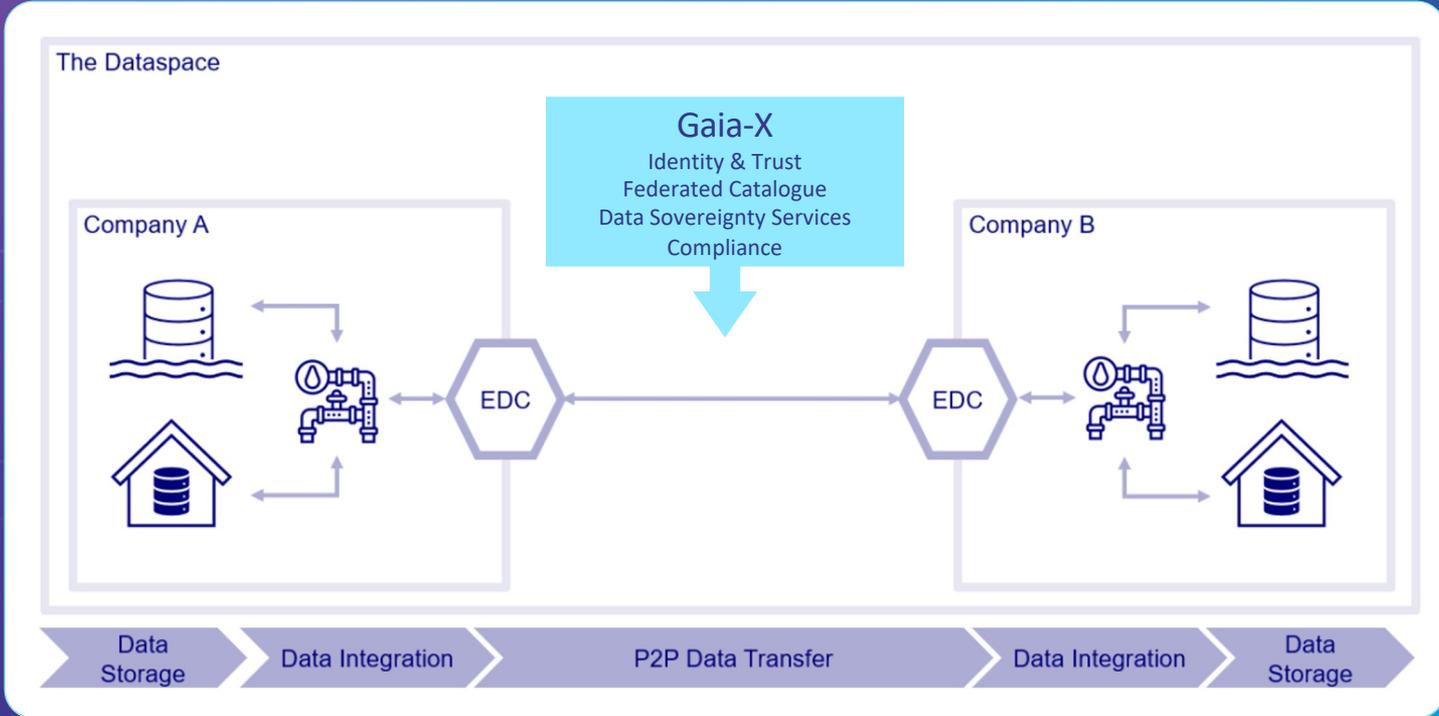

Trust – main building block in digital world

Digital validation and verification: digital proofs of identity, membership, compliance, etc.

Digital Identities

What once had to be verified in person, can now be verified digitally.

Self-Sovereign Identity (SSI)

Sovereignty assurance: full control over data and identity information.

Decentralized Solution

Self-management without depending on third-party providers.

Importance of Standards

Usage of standards improves the market acceptance and interoperability.

Implemented Standards:

- [W3C Decentralized Identifiers](#)
- [W3C Verifiable Credentials](#)
- [Gaia-X Trust Framework 22.10](#)
- eIDAS

Digital identity verification
ensures trust in dataspace
Trust, but verify!

Secure digital identities for organizations & machines

Reduces overall business risks & increases consumer confidence through reliability of trust chains

Boosts operational efficiency through automation

Proof of authenticity and origin of digital assets

Ensures regulatory compliance, e.g., GDPR, eIDAS

Creates long-term business relationships built on trust

Trusted Data Sources

- **VAT ID:** for the European member states or North Ireland, the VAT Information Exchange System (VIES)
- **EORI:** registration and identification of economic operators in the European Union
- **LEI Code:** the Global Legal Entity Identifier (GLEIF) with worldwide coverage
- **Local Commercial Registration Number**

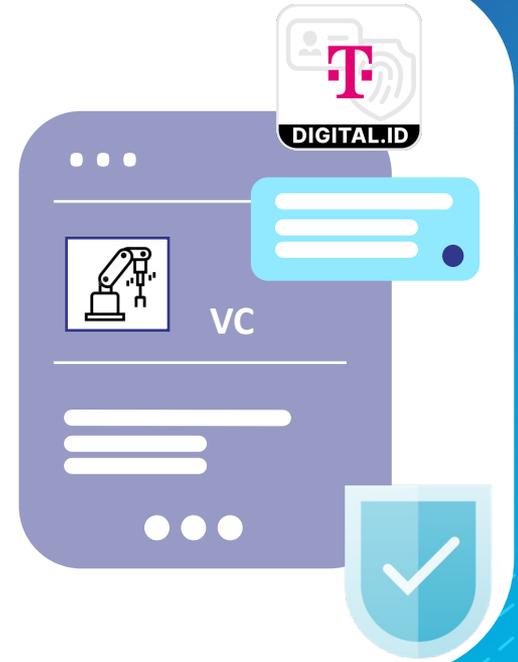

Validation Service: validation of companies' legal commercial registration numbers & European financial transaction identifiers

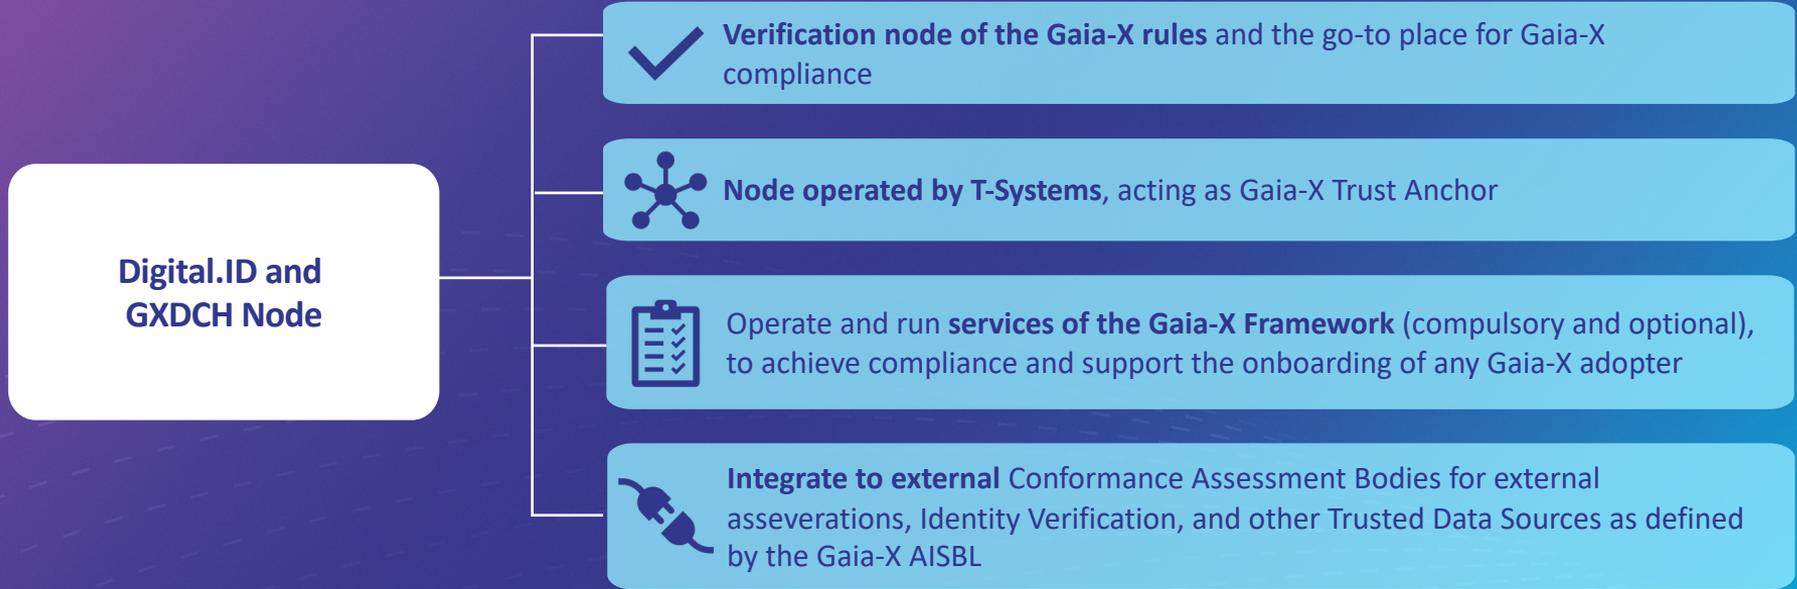

Gaia-X Compliance Service: validates the shape, content and credentials of self-descriptions attesting the result of the Gaia-X compliance proof

Notarization Service: adds eIDAS conform digital signature by Telekom Security

Gaia-X Registry Service: list of valid shapes, as well as valid and revoked public keys

Business Reporting Service: reporting of successful and rejected validations

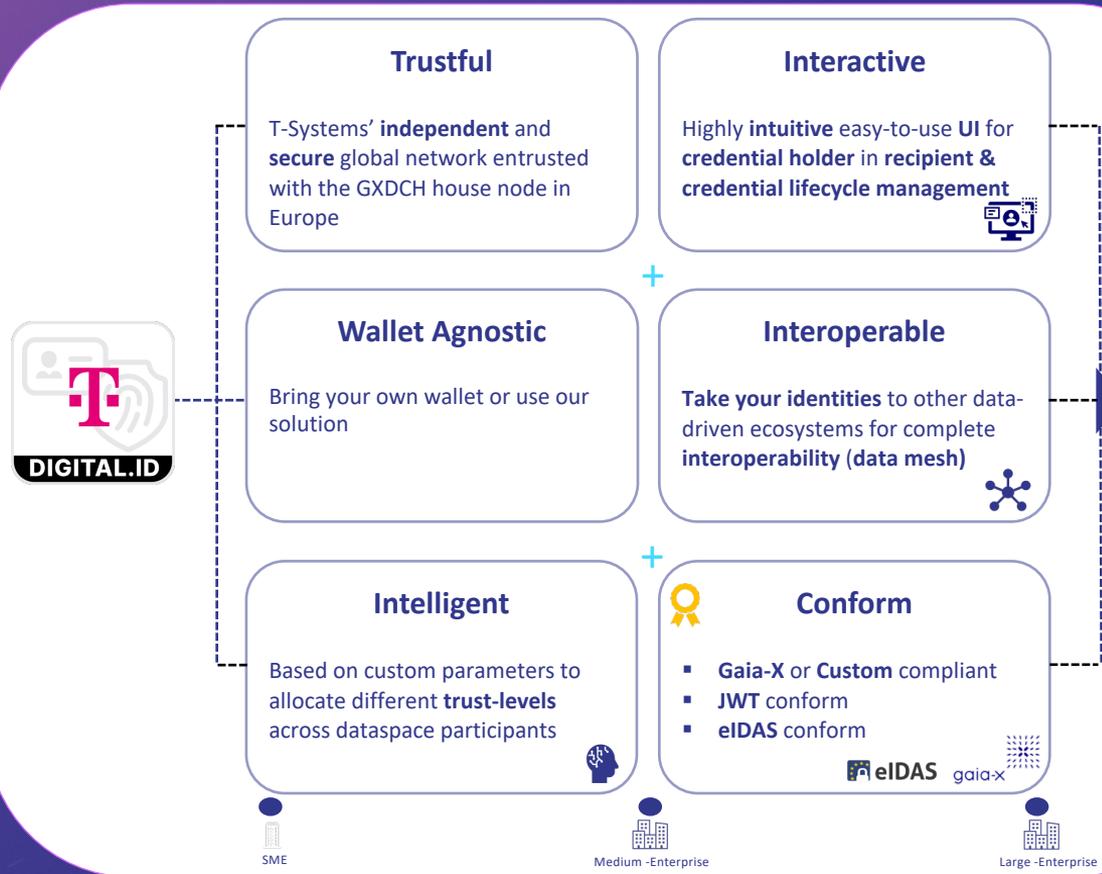

Notarization API

- Authenticates master data and converts it into **verifiable W3C format**
- Establishes **trust through tamper-proof digital assertions** for accurate self-descriptions

The three Pillars of the AMS Governance

Gaia-X Federation

Minimum Requirements for the construction and participation in the Gaia-X ecosystem:

Basic Level of

- Interoperability
- Data Sovereignty

IRM-Governance

Organizational Structure

- Role Definition
- Role Assignment
- IRM Parameterization

AMS-Specific

Additional Regulations at the Federation and Use-Case level:

- Business Framework Conditions
- Regulation of Process Flows and Value Creation for successful Collaboration

Roles in the Gaia-X 4AMS Ecosystem

Gaia-X 4AMS emphasizes diverse, clearly defined 28 roles (clustered into 8 meta roles) to create an efficient data space. It allows participants to assume multiple roles in any combination, promoting broad participation and enhancing the ecosystem by enabling multiple entities to fulfill the same roles.

System Management

- Governance
- Transaction Management
- Compliance

System Core

- System Federator
- System participant

System Basic Functions

- Marketing & Sales
- Communication
- Legal Consultation
- Portfolio Management

System Services

- Portal & Integration
- Dataspace Connector
- Data Sovereignty
- Service Catalogue
- Identity & Trust
- Conformity & Onboarding

Data Management

- Data Owner
- Consulting
- Service Owner
- Forensic Service Management
- Mapping management

Data Tethering

- Advanced Data Services
- Advanced Mobility Services

Infrastructure Management

- Mobile Devices Operator
- Incident Response Management
- Roadwork Management
- Lead Centre Management

Infrastructure Tethering

- Hosting Infrastructure
- Communication Infrastructure
- Traffic Infrastructure
- Traffic Participants

Role Assignment with the Institutional Role Model

Status Quo Analysis

Inventory of the current organizational and cooperation structure. Identification of relevant actors, institutions, and roles.

Requirements Analysis

Identification and definition of relevant institutions and roles for a resource-efficient organizational structure.

Matrix Evaluation

Evaluation of competence and trust identification using a matrix-based assessment method, taking into account temporal dimensions

Simulation

Application of the algorithm for demand-oriented resource allocation with a concept for the implementation of added value

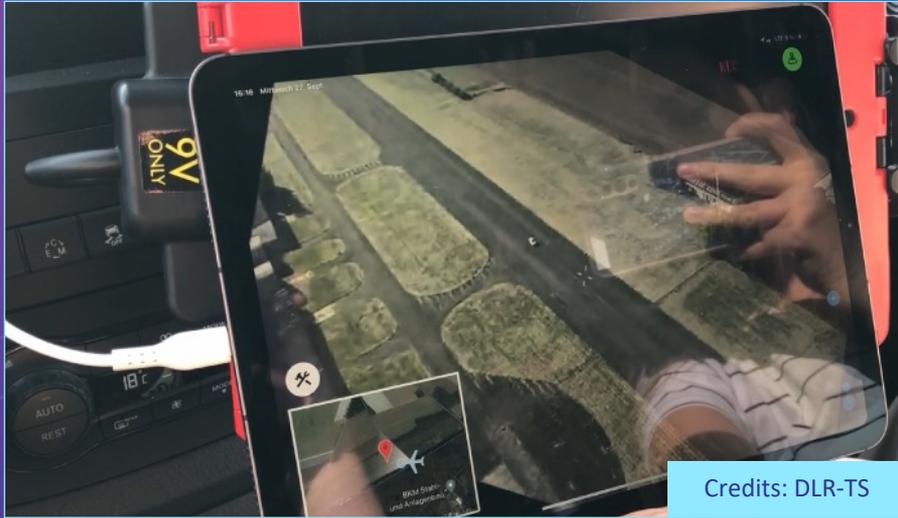

Results

Specific role assignments with an optimal outcome

Use Cases of Rescue Mobility

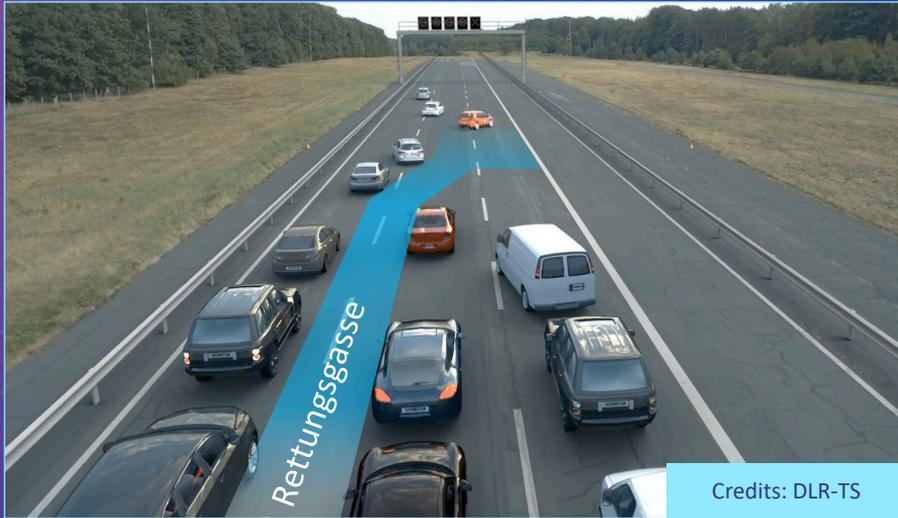

Pre-flight and reconnaissance of the situation for larger operations using drones

Construction site and warning service with GAIA-X connection

Use Cases of Rescue Mobility

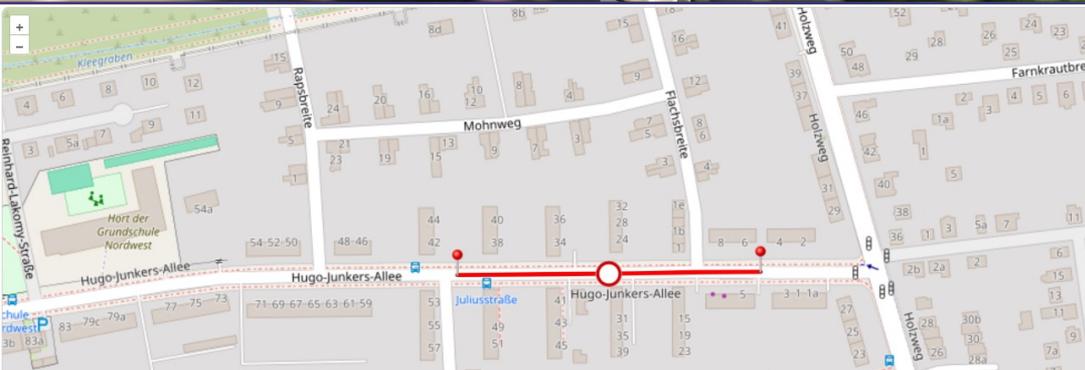

Emergency lane service for automated and connected vehicles

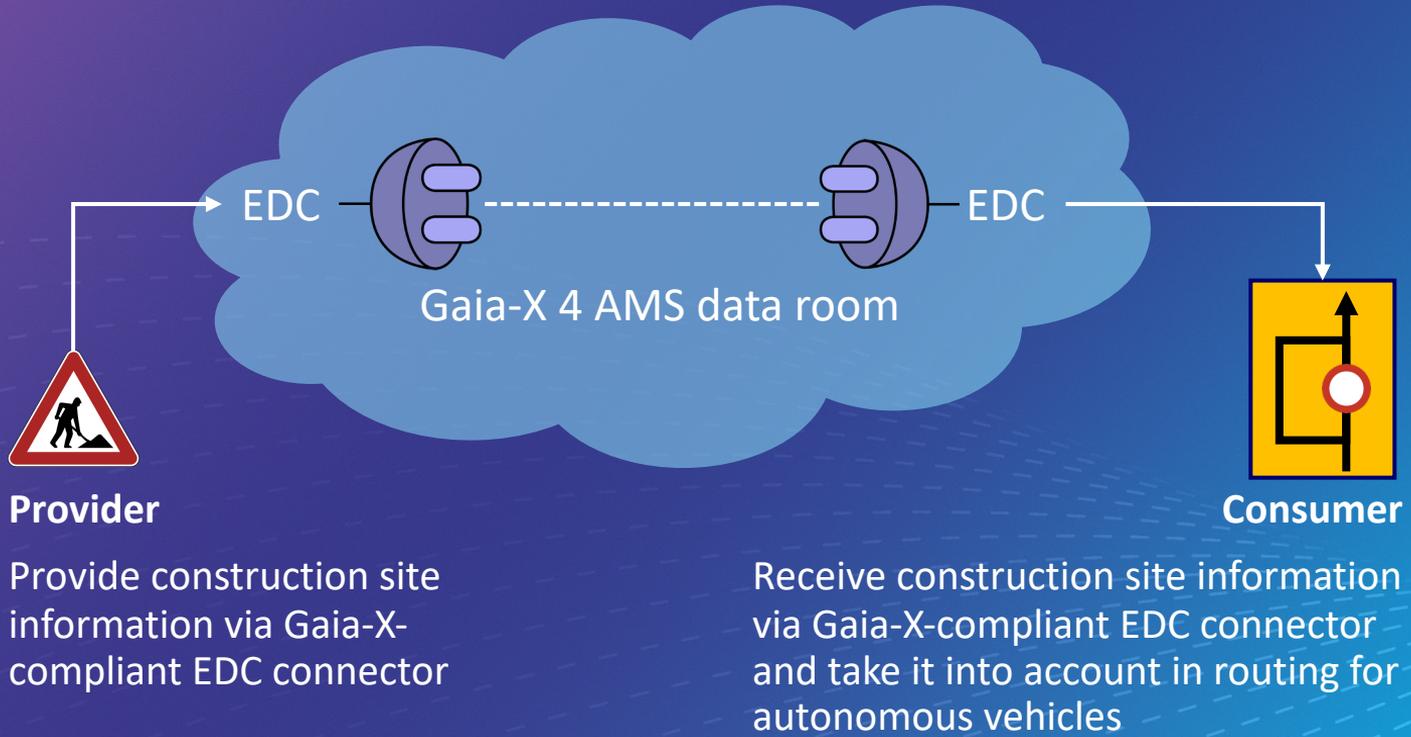

Forensic approaches within GAIA-X

Construction sites

- Data available from many different sources
- Integration into the Gaia-X data room brings added value, e.g. for autonomous driving

Provider

Provide construction site information via Gaia-X-compliant EDC connector

Consumer

Receive construction site information via Gaia-X-compliant EDC connector and take it into account in routing for autonomous vehicles

Warning messages

- Short-term traffic disruption, e.g. oil spill
- Entry via web application, e.g. by the fire department or traffic control center
- Integration into the Gaia-X data room
- Data can be used to warn other road users via V2X

Ölspur

Ursache: Verminderte Fahrbahnhaftung ▾

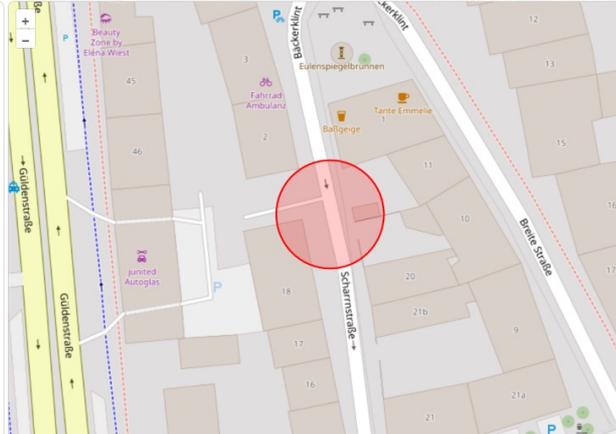

Zeitpunkt: 20.03.2024 16:21:10

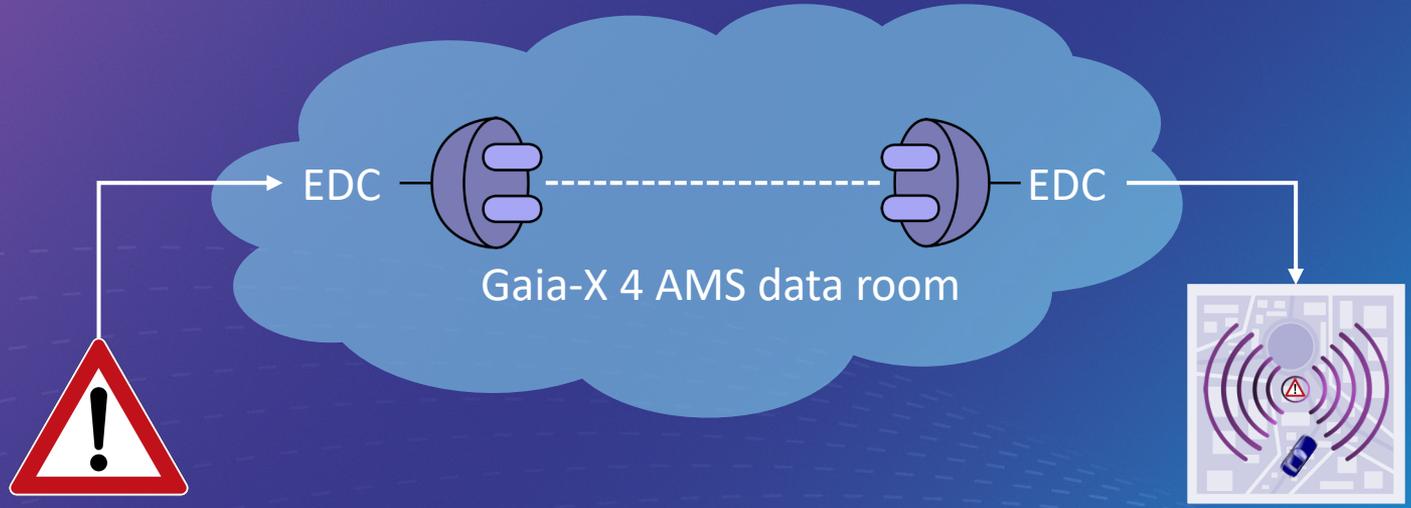

Name: Ölspur

Beschreibung

Ölspur auf Scharnstraße

Löschen Speichern

Provider

Provide warning messages via Gaia-X-compliant EDC connector

Consumer

Receive warning messages via Gaia-X-compliant EDC connector and send them to vehicles via V2X

Corridor for emergency Vehicles

- Incoming information on planned trajectory of emergency vehicle
- Perception of environment
- Trajectory planning to provide suitable space to the emergency vehicle
- Autonomous movement to the roadside

Corridor for emergency Vehicles

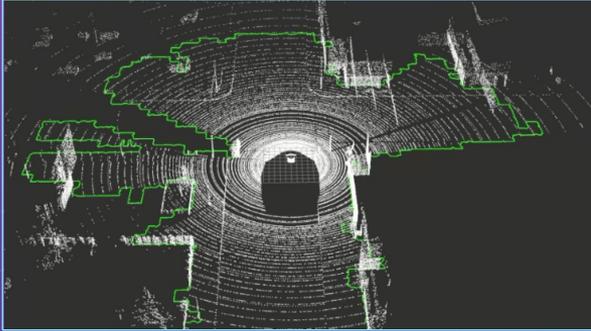

- Incoming information on planned trajectory of emergency vehicle
- **Perception of environment**
- Trajectory planning to provide suitable space to the emergency vehicle
- Autonomous movement to the roadside

Corridor for emergency Vehicles

- Incoming information on planned trajectory of emergency vehicle
- Perception of environment
- **Trajectory planning to provide suitable space to the emergency vehicle**
- **Autonomous movement to the roadside**

Perception Modules

Perception of the environment with awareness of free space allowing movement

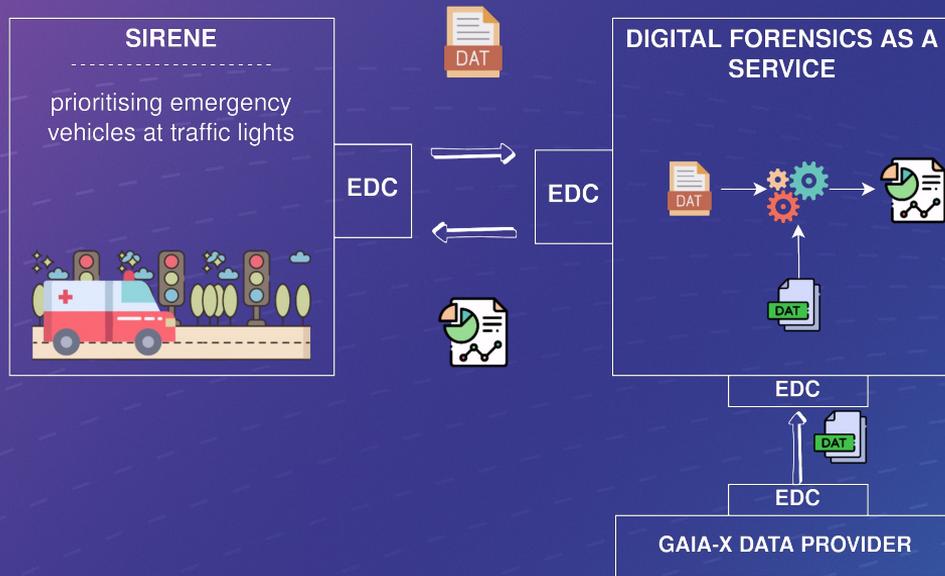

Trajectory planning in awareness of environment

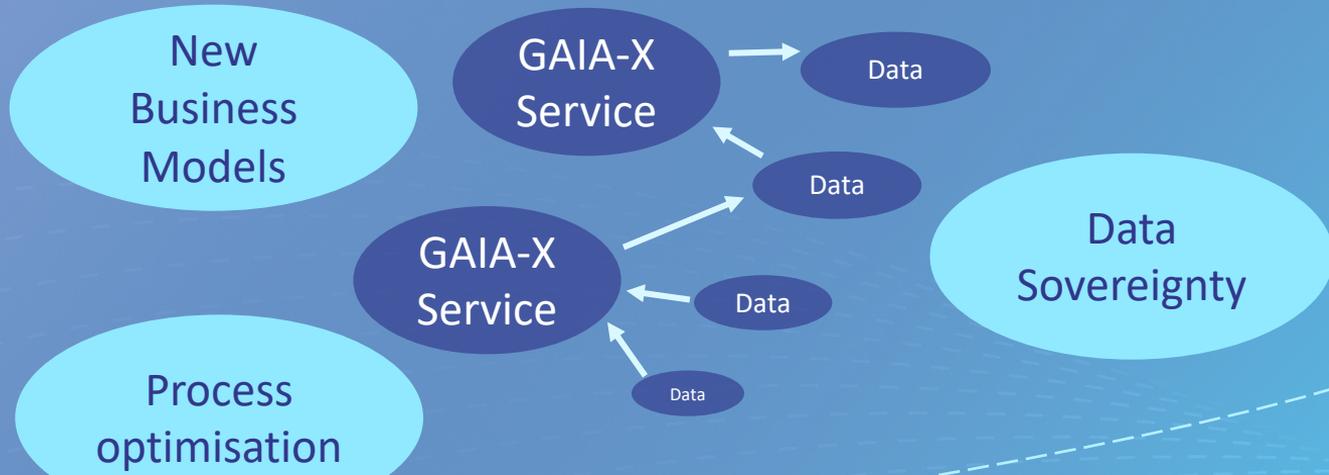

Capability to autonomously control the vehicle to clear the path for the emergency vehicle

Digital Forensic aaS

- SIRENE capable of controlling traffic lights
 - To activate green waves for emergency vehicles
- To detect misuse, system is connected to a Digital Forensic Service
- Digital Forensic as a Service
 - Receives and analyses Data and returns results via EDC
 - SIRENE Data can be enriched with data from other data providers

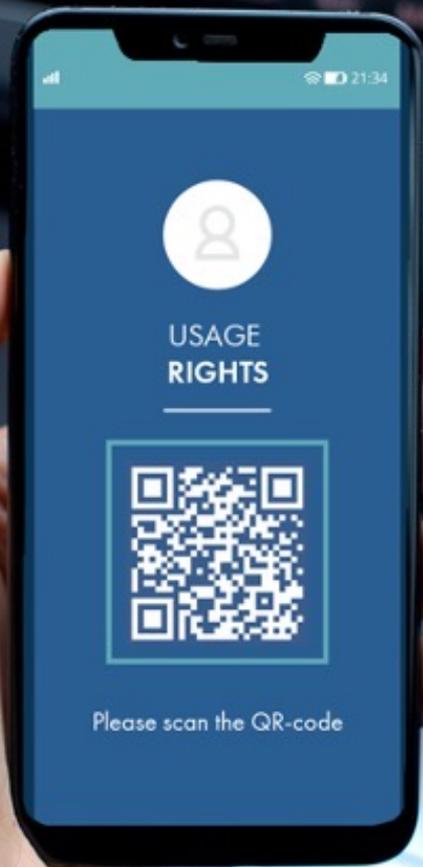

Benefits for the rescue mobility use case through GAIA-X

Identity, Selfdescription, Catalogue, Policies, Contracting, Ecosystem
GAIA-X

How can we ensure that **providers** and **users** find each other **worldwide** in accordance with **European standards** to generate **business immediately**?

With Gaia-X Credentials

based on SSI

-  Digital evidence directly into the leading system
-  Digital rights for direct use in the chosen ecosystem
-  Transfer all information digitally to customers

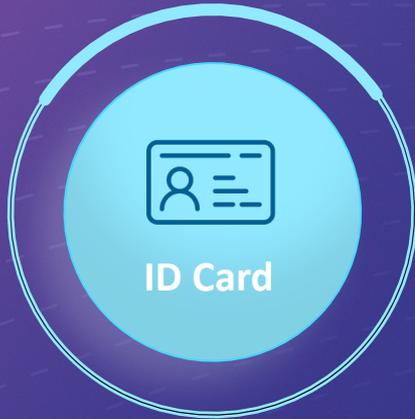

SSI at a Glance

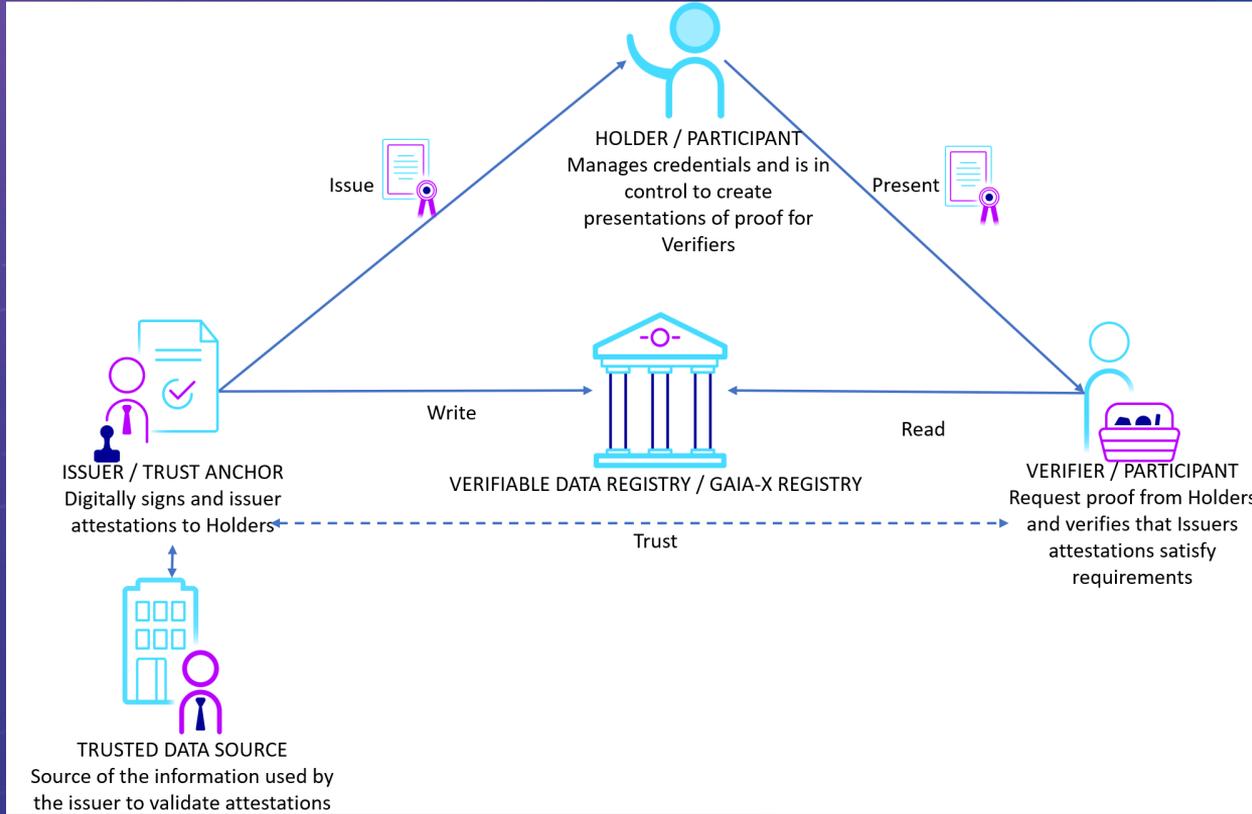

- ✓ Identification through Digital Identities
- ✓ Digital Credentials (Verifiable Credentials)
- ✓ Data sovereignty
- ✓ Data storage at the user
- ✓ Based on credentials

SSI at a Glance

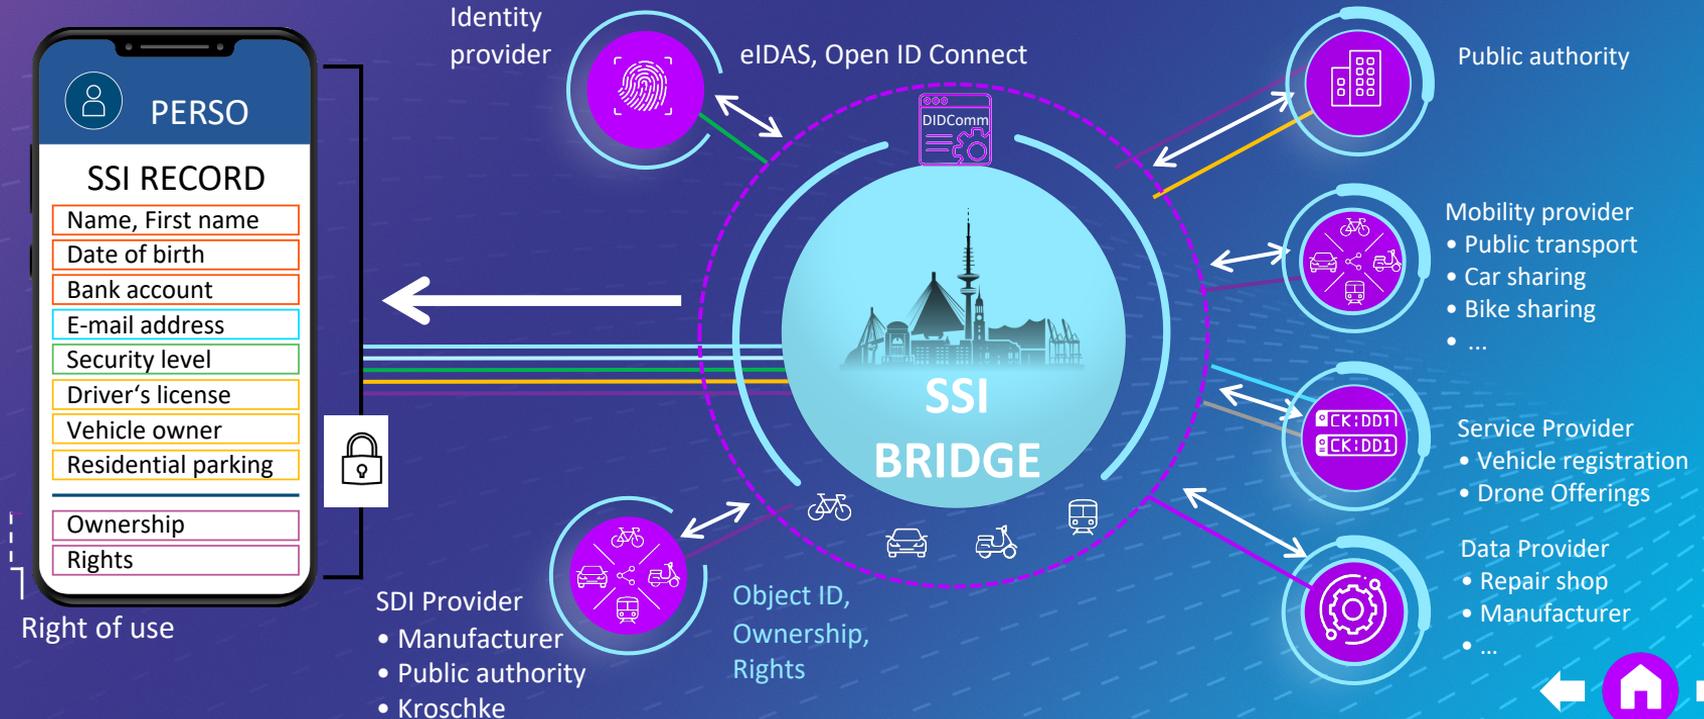

Securely proof individual rights / information completely digital to third parties.

The Provided Digital Identities

enables all participants to digitally implement their processes.

Time for a demonstration!

Identity, Selfdescription, Catalogue, Policies, Contracting, Ecosystem
GAIA-X

Payment in the AMS dataspace

- fully automated & integrated payment processes (with smart contracts / payment provider)
- external modules like an ERP can be integrated
- no additional authentications needed (a GaiaX identity is sufficient)

- A decentralized digital network based on European values
- Standardized, open, and safe digital environment
- Free and secure exchange of data and services
